Iraq, the "Land between the two Rivers", has been the cradle of major civilizations starting from the fifth millennium BCE, which marked the watershed between the prehistory and history of humanity. It has gifted the world with many of academia’s pillars of wisdom, knowledge and science.

Iraq designates the foundation where human beings first built cities, organized complex states, formulated elaborate religious beliefs (including the Abrahamic religions of Judaism, Christianity, and Islam), invented writing, developed sophisticated visual and literary expression, and articulated measures for maintaining law and justice. The first written records, domestic laws, astronomy, mathematics, pharmacology, and the wheel are considered to have been developed at Ur, the earliest civil society in the world.

A thousand years ago, the Muslim World made remarkable contributions to science. Muslims introduced new methods of experiment, observation, and measurement. Ibn al-Haytham wrote the laws of the reflection and refraction of light and expounded the principles of inertia (long before Isaac Newton formulated his theories). Ibn Sina wrote the Canon of Medicine (al-Quanun fi’l-Tibb), a 318-page medical text that was the basis for all medical teaching in Europe and the Middle East for hundreds of years. The translations of scholarly treatises made the banks of the Tigris and the Euphrates the forum of civilizations. Iraq represents the repository of intellectual and scientific growth.
“The list of humankind’s momentous “Firsts from Mesopotamia” is too long to detail. Mesopotamian religious, literary, and artistic traditions represent the origins of advanced culture. Their value to world civilization is inestimable. Understanding of Mesopotamia illuminates fundamental aspects of Judeo-Christian tradition and of Islam, and Mesopotamia has ties as well to ancient Greece—chapters of human history that gave shape to the world we inhabit today. The geographical realm of ancient Mesopotamia extends into the modern states of Syria, Iran, and Jordan, but for the greatest part lies within Iraq. As scholars committed to the study and teaching of the history and culture of Mesopotamia, many of whom have been guests of the Iraqi people, we have deep ties to persons in Iraq as well as a profound appreciation for the cultural resources preserved within its borders.

The only access that our and future generations have to ancient Mesopotamia is through the ancient physical remains left behind. Each artifact, written text, and archeological context is unique and irreplaceable. Once destroyed, that link to humanity’s past is lost, to us and to our descendants, forever.

Students of a civilization reaching back more than 5,000 years, we are accustomed to taking a long-term view of history and historical events. Destruction of Iraqi cultural heritage will result in devastating and irrevocable losses to human civilization, and to participate in or allow such destruction may inflame resentment and anger throughout the world, particularly in the Middle East.”

Eleanor Robson, Ph.D., Professor of History and Philosophy of Science, University of Cambridge.

How little we know of the Arab world, of Iraq and its people, of the place that Baghdad – the Florence of the Middle East – has in the hearts and minds of Arab peoples. Iraq, the Cradle of Civilization – how could we have thought that Iraqis would not defend their country from invasion? I have taught about the peoples and cultures of the Arab world at Berkeley since 1960. I have been struck by the depth of ignorance about this large expanse of the world.

Laura Nader, Ph.D., Prof., Dept. of Anthropology, University of California, Berkeley

Peace cannot exist without equality; this is an intellectual value desperately in need of reiteration, demonstration, and reinforcement.

The current fraught and muddled situation in Iraq has typically been addressed at a level of abstraction that provides little access to the reality of life in all its dimensions, and the experiences and feelings of those who must cope with degrees of trauma and disarray that make what Americans faced after 9/11 pale by comparison. Among these dimensions is the fate of institutions crucial to a viable future for Iraq and its people. These include the Iraq National Library and Archive, other major archives, and the twenty universities, at the core of which are the libraries that should serve their faculty and students. For Iraq to have a future it must have thriving institutions of higher education and a necessary condition for that is adequate, functioning libraries.

Jeffrey B. Spurr, Islamic and Middle East Specialist, Harvard University

Whoever is directly responsible for the dangers facing Iraq’s institutions of learning and its educators, the situation seriously threatens the emergence of a secular, moral and democratic leadership from within Iraq. If such a society is to emerge from beneath the scars caused by years of sanctions, from the rubble left by a remorseless and mendaciously justified war, intellectuals are the best and, in my opinion, the only chance of enabling Iraq to realise its human capabilities.

Andrew N. Rubin, Ph.D., Prof., Dept. of English, Georgetown University

“I firmly condemn the campaign of violence waged in Iraq against academics and intellectuals. The right to education is a basic human right and the persecution of the custodians of knowledge and skills is an unacceptable attack against a whole society. Iraq has a long tradition in learning and academic excellence in the Middle East. By targeting those who hold the keys to Iraq’s reconstruction and development, the perpetrators of this violence are jeopardizing the future of Iraq and of democracy.”

Koïchiro Matsuura, Director-General of UNESCO (April 2006)
Universal Declaration on Cultural Diversity
United Nations Educational, Scientific and Cultural Organization
This is a legal instrument which recognizes, for the first time, Cultural Diversity as a “Common Heritage of Humanity” and considers its safeguarding to be a concrete and ethical imperative, inseparable from respect for human dignity. 2 November 2001

The Iraq War & Archeology
Joint Project – University of Vienna and Archeos
http://iwa.univie.ac.at/index.html

This Canadian International Youth Letter (CIYL) is part of a new series with an emphasis on science and human affairs. The series incorporates cultural and youth studies as well as research-based information on the science of human behaviour, including the effects of war, destructiveness and violence on youth development, global mental health and the environment. Under the theme "Exploring New Ways of Knowing – A Meeting of Minds, Science and Human Experience" it is part of the new project of the International Youth Network for the Advancement of the Sciences, Humanities and Global Bioethics (IYNet)

© 2007 Public Awareness Education Programs of the Sciences & Humanities – Technology & Global Bioethics (PAEP). As an NGO member of Forum UNESCO and UNEP, PAEP takes initiatives, working with and for youth to promote and advance the universal values and principles of the United Nations Educational, Scientific and Cultural Organization and UNEP; to respect cultural diversity as the common heritage of humanity; to foster a new transdisciplinary educational, scientific, environmental and inter-cultural dialogue towards a universal code of ethics for the benefit of present and future generations; to build awareness and to strengthen international cooperation in the protection of the world's natural, cultural, intellectual and scientific heritage.
